[GITHUB-REPO-SITE](#)

This Term Project we decide to use the game that we've been playing to this day. The game has products that they sell but their products are usually over priced or other players simply don't want to use too much money. Player wants to use the least amount of money to get the most out of it, so we're here to sell them the thing that they need. First, we created a webpage that shows the players what products we got. We have the same product that the game sells but at a much smaller price around 20% to 50% off. We added 12 items to the web page right now and it will have more in the future. We also made a login site for the customers to make an account to buy the items that they want and they can also receive notifications of any new product that's added in the future. We got a shopping cart that will show them what they added and the total price. It also has a search bar that can help the players find the items too.
